APPLIED STEPS

Source

In Power Query Editor, after appending and cleaning all the .csv files and applying the necessary steps.

Power Query Editor interface showing the 'csv files' query. The ribbon includes tabs for File, Home, Transform, Add Column, and View. The Transform tab is active, displaying various transformation options like Merge Queries, Append Queries, Combine Files, Manage Parameters, Data source settings, New Source, Recent Sources, and Enter Data.

The main area displays a table with columns: Order ID, Customer, Item, Revenue, Cost, Order Date, and Order Status. The table contains 26 rows of data.

The right sidebar shows the 'Query Settings' pane, which includes the 'PROPERTIES' section (Name: csv files) and the 'APPLIED STEPS' section. The applied steps list includes: Source, Filtered Rows, Removed Other Columns, Filtered Hidden Files1, Invoke Custom Function1, Removed Other Columns1, Expanded Table Column1, and Changed Type (highlighted).

- Expanded Table Column1
- Changed Type**

In Power Query Editor, after appending and cleaning all the .xlsx files and applying the necessary steps.

The screenshot displays the Power Query Editor window titled "xlsx files - Power Query Editor". The ribbon at the top includes tabs for File, Home, Transform, Add Column, and View. The Transform tab is active, showing options like Choose Columns, Remove Columns, Keep Rows, Remove Rows, Sort, Split Column, Group By, Data Type: Text, Use First Row as Headers, Replace Values, Merge Queries, Append Queries, Combine Files, Manage Parameters, Data source settings, New Source, Recent Sources, and Enter Data.

The main area shows a data table with the following columns: 2018 Order_Data, Order ID, Customer, Item, Revenue, Cost, and Order Date. The table contains 27 rows of data, each representing an order. The formula bar at the top of the table area shows the query definition: `= Table.SelectRows("#\"Extracted Text Before Delimiter\", each ([Revenue] <> \"Revenue\"))`.

On the right side, the Query Settings pane is open, showing the Name field set to "xlsx files". Below this, the APPLIED STEPS section lists the following steps: Source, Filtered Rows, Removed Other Columns, Filtered Hidden Files1, Invoke Custom Function1, Removed Other Columns1, Expanded Table Column1, Changed Type, Removed Other Columns2, Expanded Data, Promoted Headers, Changed Type1, Extracted Text Before Delimiter, and Filtered Rows1. The "Filtered Rows1" step is currently selected.

After the successful import of data from all .accdb files into Excel..

The screenshot displays the Microsoft Excel interface with a table of employee data. The table has columns for Shift, ID, Employee, Department, Designation, Gender, Email ID, Employment Type, Marital Status, Hiring Date, Salary, Address, and Land. The data is organized into 28 rows. The Queries & Connections pane on the right shows a list of queries, including 'accdb files' which has 81 rows loaded.

| Shift | ID | Employee | Department | Designation | Gender | Email ID | Employment Type | Marital Status | Hiring Date | Salary | Address | Land |
